

Step 1: Open Illuminates website via link <https://illuminates.org/>.

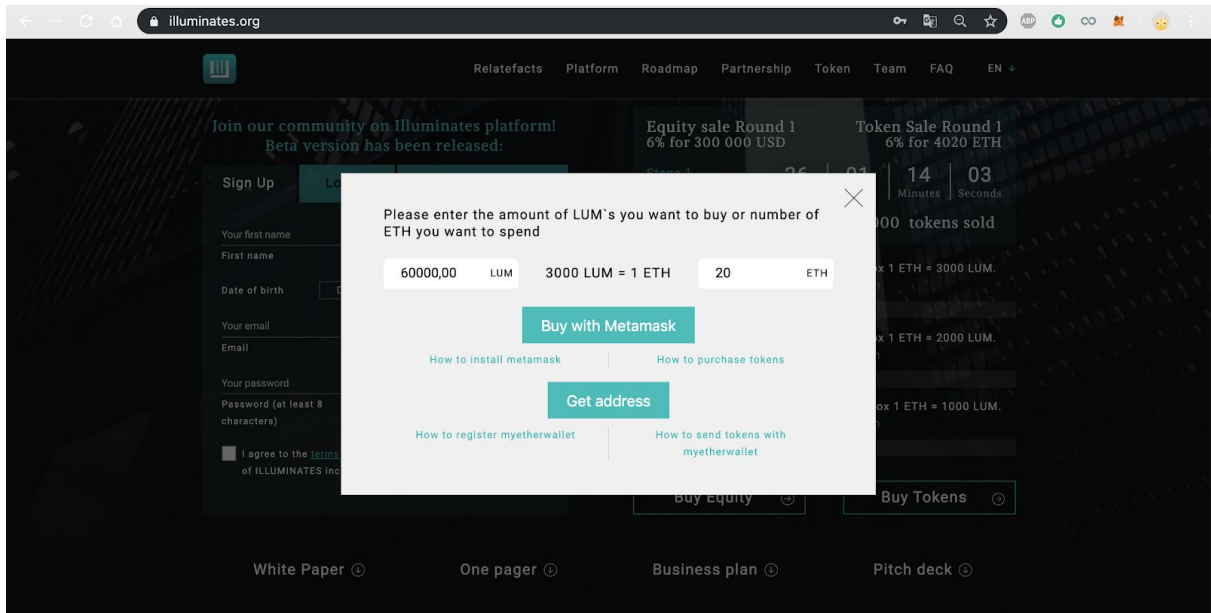

Step 2: Click “Buy Tokens” button

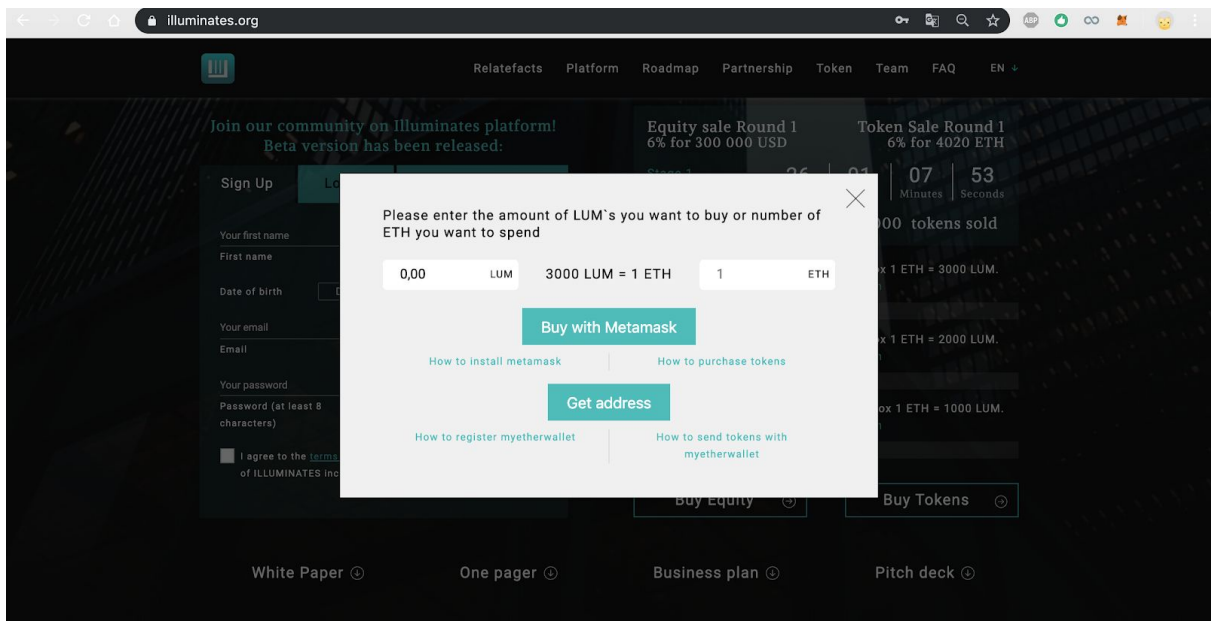

Step 3: “Buy Tokens” pop-up will appear. Now fill the amount you want to invest using calculator.

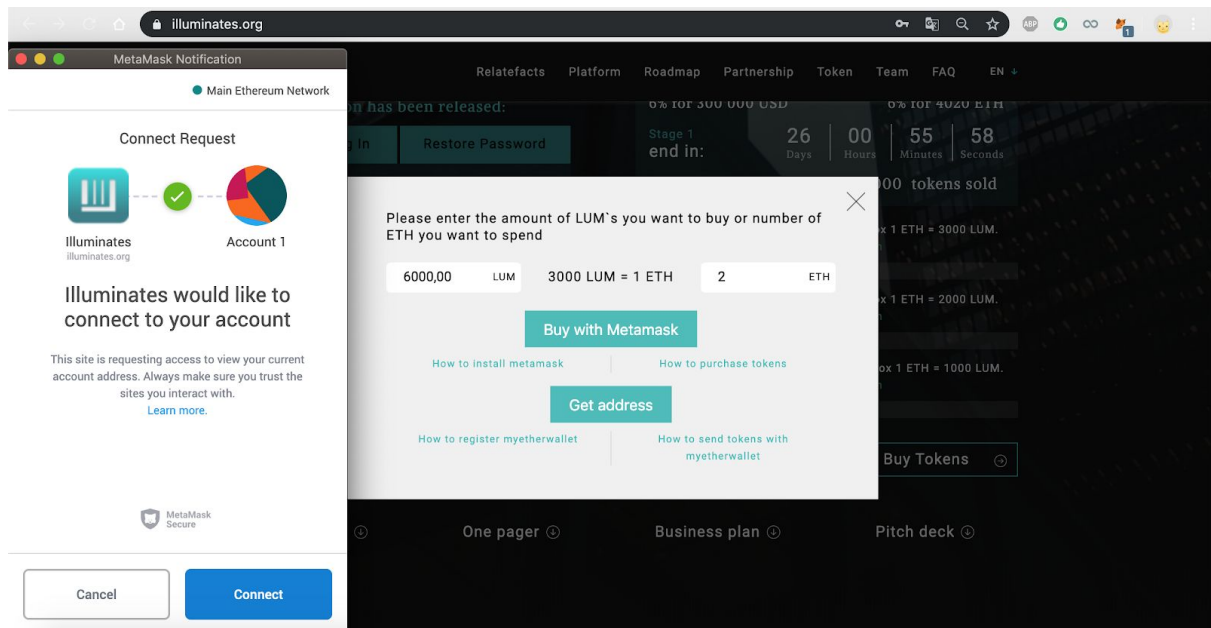

Step 4: After you input the final amount of ETH you want to invest, click on “Buy with Metamask” button.

Step 5: New tab with Metamask will appear with “Cancel” and “Connect” buttons. These buttons will prompt a popup from MetaMask (or other dapp browser of choice) asking if the user wants to grant the site access to their public account information. The extension will remember which sites have been approved until the user clears their list. We need such approval, to form automatic transaction which you could confirm or decline on the next step. Click “Connect” button to proceed.

Step 6: Check the transaction details and make sure that you have enough ETH to make transaction. If you decide to change the ETH amount which you want to contribute, click on “Reject” button and get back to step 3. If everything is ok, just click “Confirm”. Please note: we automatically setted GAS limit to 170 000, because such amount is required to successfully participate in PreSale.
