

WHAT WE DO?

We are developing new blockchain-based technology - Relatefacts, which will allow checking Business(professional) relations history and actual expertise of remotely located counterparty, no matter if it individual or legal entity.

OUR MISSION

We want to make remote business relations safer, more transparently and completely eliminate such concepts as: scam; fraud; fake accounts, portfolios, and expertise; data spoofing;

HOW THE RELATEFACTS WORKS?

First of all, the system will generate user very own hashed ID, based on user personal data (or legal documents for entities). From now on, when users participating in any reputation affecting business activities, they hashed ID will be tethered for it and used in Relatefacts smart contracts. Those contracts will gather information about: how event was completed, how the participants rate each other, how the verified off-chain experts (oracles) rate the results - and using mathematical formulas, calculate the reputation score.

SOLUTION FOR THIRD PARTY DEVELOPERS

We are developing Relatefacts SDK that will allow users to create new solutions, and Relatefacts API, which will be used to connect any Relatefacts based solutions to any existing system.

RELATEFACTS FEATURES

- Transparency** - Relatefacts shows user exact reputation score based on social and business activities;
- Data secureness** - user personal data didn't stored in the system but get deleted right after generation of hashing ID;
- Interconnections** - every private or public and open blockchains, which supports smart contracts could be used for storing and sharing reputation history;
- Anonymity** - besides the reputation score, user can choose, which part of his reputation history he wants to share with other users;
- Unvarying** - every reputation based event is stored in a blockchain, via special standardized smart contracts, and couldn't be changed by third parties;
- Oracles** - some reputation affecting events will happen off-chain, that's why relatefacts provides special status for trusted experts who will check it.

ILLUMINATES PLATFORM

To show the most usefull Relatefacts social and business benefits, we are developing Illuminates platform - the crypto social media, which includes various SaaS products, as:

- centralized and decentralized exchange
- startup launching platform
- freelance marketplace
- various e-commerce marketplaces

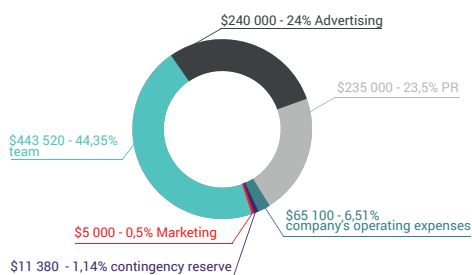

BECAME SHAREHOLDER

Seed stage of equity sale is ongoing now. We selling 6% of equity so there is 12x\$25 000 (minimal investment) spots on this round.

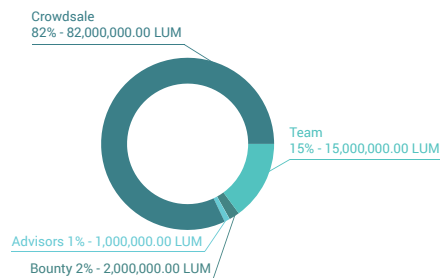

WHAT IS LUM TOKEN?

Illuminat (LUM) is a custom token, that serves to operate Illuminates platform and paying Relatefacts fees (for example when user developing his own solution and use it in commercial). LUM total supply is 100 000 000 (there is wouldn't be additional supply over time). Illuminat tokens uses ERC 20 standard and released on Ethereum blockchain

BUDGET ALLOCATION

TOKEN ALLOCATION

Volodymyr Malyshekin
CEO & FOUNDER

Nikolai Zhulinskyi
SOFTWARE DEVELOPMENT TEAM LEAD

Oleksandr Danylenko
BLOCKCHAIN DEVELOPER

Elena Morozova
FRONTEND DEVELOPER

ILLUMINATES SOCIAL MEDIA

31 000+ participants

9 700+ followers

12 000 registered users

CURRENT PROJECT STAGE

1st round of PreSale ongoing and will last until the 30th of October. The current stage bonus is 200%. Only 675 000 LUM are available for sale. 1st stage token price is 1 eth = 3000 LUM.
